Get ready for the PulseFit practical

Please do these three steps **before the practical session**. It takes about 15 minutes. In the session we'll open the notebooks and run them together, so there's no need to run anything yet.

1 ~10 min
Create a free Snowflake trial
Your own Snowflake account for 30 days, with $400 of free credits.

2 ~2 min
Download the notebooks
Six ready-made notebooks from GitHub. No coding needed.

3 ~3 min
Upload them to Snowflake
Put the notebooks into your personal workspace, ready for the session.

YOU NEED

- An email address you can open right now (your university email is fine)
- A laptop with Chrome, Edge, Firefox or Safari

YOU DON'T NEED

- A payment card: the trial is free and never charges you
- To install anything, or to write any code

1 Create your free Snowflake trial

~10 min

Page 1 of the sign-up form

Open signup.snowflake.com, then:

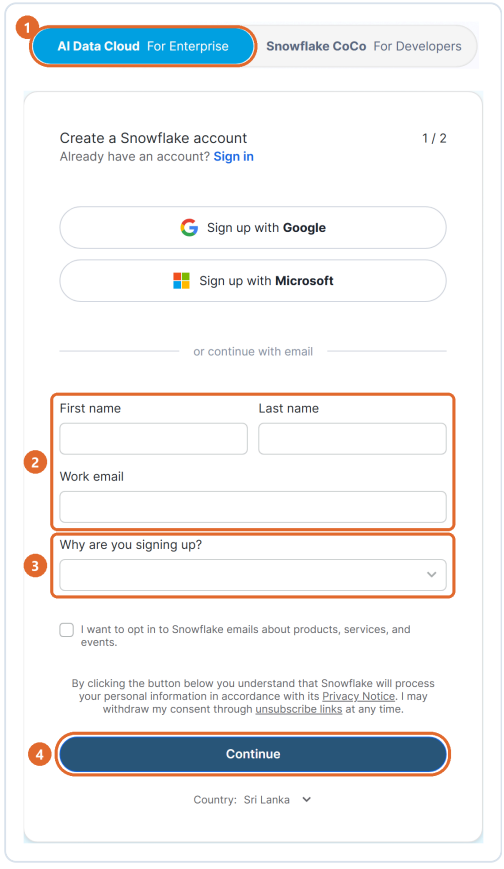

1. At the top, keep `AI Data Cloud · For Enterprise` selected (not "Snowflake CoCo").
2. Fill in **First name**, **Last name** and **Work email**. Use an email you can open now. You can also use `Sign up with Google` or `Sign up with Microsoft`.
3. Under **Why are you signing up?**, choose **Student**.
4. Click `Continue`.

Page 2 of the sign-up form

Choose these options, accept the terms and finish the sign-up:

OPTION	PICK	WHY
Edition	**Enterprise**	Has every feature we use.
Cloud provider	**AWS**	Any cloud works; this keeps the class on one setup.
Region	**Closest to you, e.g. Asia Pacific (Mumbai)**	Faster for you.

Can't change later. The cloud and region are fixed once the account exists. If you pick the wrong one, don't worry: everything in the practical still works.

Sign-up page 1. The orange numbers match the orange steps on the left.

Activate your account

1. Open the email from Snowflake (check your **spam** or **promotions** folder too) and click the **activation** button in it.
2. Choose a **username** and a **password**. Write them down somewhere safe: you'll need them in the session.
3. You now land in **Snowsight**, Snowflake's web interface. **Bookmark this page**, and keep the welcome email: it contains your account URL.

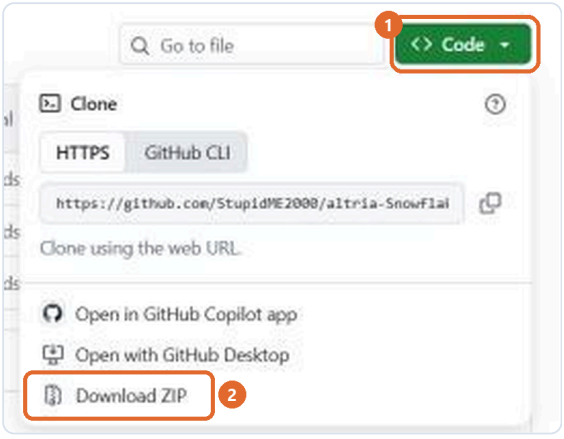

> **About the trial.** It lasts **30 days** and includes **$400 of free credits**. The whole practical uses only a small part of that. When the trial ends, the account is simply suspended. You're never charged, because you never gave a card.

2 Download the notebooks

~2 min

The notebooks are in this GitHub repository: github.com/StupidME2000/altria-Snowflake-Data-Wearhouse-Practicle-Example

1. On the repository page, click the green `Code` button.
2. Click `Download ZIP`.
3. **Unzip it.** On Windows: right-click the ZIP ▸ `Extract All`. On a Mac: double-click it. You can't upload files from inside a ZIP.
4. Open the `notebooks` folder. It contains the six files below.

GitHub: **Code** ▸ **Download ZIP**.

FILE	WHAT YOU'LL DO WITH IT IN THE SESSION
`01_Day1_Set_Up_Snowflake.ipynb`	Day 1: create compute and storage, switch on the data feeds
`02_Bronze_Load_Raw_Data.ipynb`	Load the raw files exactly as they arrive
`03_Silver_Gold_Transform_and_Model.ipynb`	Clean, connect and model the data
`04_Answer_the_CEO.ipynb`	Answer the CEO's question, then look under the hood
`05_Snowflake_Superpowers.ipynb`	Time Travel, cloning, access control and sharing
`99_Cleanup_Optional.ipynb`	Removes everything at the end (optional)

> **Prefer single files?** Click a file name above to open it on GitHub, then use the **Download raw file** button (top right of the file). Don't right-click a link and choose "Save link as": that saves a web page, not the notebook.

3 Upload them to your Snowflake workspace

~3 min

1. Sign in to Snowsight (use your bookmark from step 1).
2. In the left menu, select **Projects** ▸ **Workspaces**. You're now in **My Workspace**, your own private workspace.
3. Select **+ Add New** ▸ **Upload Files**.
4. In the file picker, open the `notebooks` folder, select **all six** `.ipynb` files (**Ctrl + A** on Windows, **Cmd + A** on a Mac) and confirm.
5. Check that the six notebooks now appear in the file list on the left. That's it, you're ready!

> **Please wait for the session.** You can open a notebook to have a look, but **don't click Connect** yet: that starts compute, and we'll set it up together. Also, don't rename the files.

✓ Before the session, check that...

- [ ] you can **sign in** to your Snowflake trial (account URL bookmarked, username and password at hand)
- [ ] **Projects** ▸ **Workspaces** ▸ **My Workspace** shows the **six PulseFit notebooks**
- [ ] your laptop is charged (or you bring the charger)

? If something goes wrong

WHAT HAPPENED	WHAT TO DO
No activation email after 10 minutes	Check spam and promotions. Still nothing? Sign up again with a different email address.
I picked a different cloud or region	No problem. The practical works in every cloud and region.
I can't find Workspaces	It's in the left menu under **Projects**. If the menu is collapsed, expand it first.
I uploaded the ZIP or a wrong file	Hover over the file, click ⋮ ▸ **Delete**, then upload the six `.ipynb` files.
A notebook opens as strange text or HTML	You saved the GitHub web page instead of the file. Use **Download ZIP** instead.
Anything else	Don't worry: come to the session a few minutes early and we'll fix it together.

See you in the session! Bring your questions: we'll build PulseFit's data warehouse and answer the CEO's question together.
